

Homework 11

Do the problems on **Webwork** and turn the following problems in class on April 27th.

Homework should be written neatly and clearly explained. If it requires more than one sheet, the sheets must be stapled. Include your name and id number in the top right corner of your homework.

Problem 1. The amount of time it takes for a bus to arrive is an exponential random variable with parameter 1. Once the bus arrives the amount of time to load the bus is a random variable uniformly distributed on the interval $[0, 2]$. These two random variables are independent. Compute the pdf of the time for the bus to arrive plus the time to load.

Problem 2. Let X be an exponential random variable with parameter 1 and $Y = (X - 1)^2$. Compute the pdf of Y .
