## The Symmetric Group and Non-Crossing Partitions

## Abstract for the Combinatorics and Algebra Seminars 2008 December 2

I will define a poset relation on the symmetric group  $S_n$ , which gives a natural order-preserving function from  $S_n$  to the lattice of partitions. If we restrict our attention to elements in  $S_n$  under a particular n-cycle, we have a lattice which is isomorphic to the lattice of non-crossing partitions. If time permits I'll talk about some of the implications.

This work is based on a paper by Thomas Brady.
