**Title: A Charming Conjecture Coming From Mathematical Psychology**

---

Combinatorics Seminar, Tuesday, February 4, 2020

---

In joint work with John Dunn I've been trying to establish whether two types of psychological model are actually equivalent. The problem reduces to a simple, purely combinatorial question about patterns among inequalities in a rectangular array of numbers. I don't know the answer to the question: this talk is my shameless effort to recruit some help.
