

Data Science Seminar
Department of Mathematical Sciences

DATE:	Tuesday, April 24, 2018
TIME:	12:00pm - 1:00pm
LOCATION:	WH 100E
SPEAKER:	Leila Setayeshgar (Providence College)
TITLE:	Large Deviations for a Class of Stochastic Semilinear Partial Differential Equations

Abstract

Standard approaches to large deviations analysis for stochastic partial differential equations (SPDEs) are often based on approximations. These approximations are mostly technical and often onerous to carry out. In 2008, Budhiraja, Dupuis and Maroulas, employed the weak convergence approach and showed that these approximations can be avoided for many infinite dimensional models. Large deviations analysis for such systems instead relied on demonstrating existence, uniqueness and tightness properties of certain perturbations of the original process. In this talk, we use the weak convergence approach, and establish the large deviation principle for the law of the solutions to a class of semilinear SPDEs. Our family of semilinear SPDEs contains, as special cases, both the stochastic Burgers' equation, and the stochastic reaction-diffusion equation.
