| LOCATION: | WH 100E |
| SPEAKER: | Wenbo Wang, Binghamton University |
| TITLE: | Vector representation of words from very large data sets |

Abstract

Tomas Mikolov et al. proposed two novel model architectures for computing continuous vector representation of words from very large data sets. Recent years, it has become a very hot field in the industry known as 'word2vec'. In this talk we will go over the two models (Skip-gram Model and Continuous Bag-of-Words Model) and some tricks used to implement them.
