TITLE:	On the Convergence Rate of the Quasi- to Stationary Distribution for the Shiryaev- Roberts Diffusion

Abstract

For the classical Shiryaev–Roberts martingale diffusion considered on the interval [0, A], where A > 0 is a given absorbing boundary, it is shown that the rate of convergence of the diffusion's quasi-stationary cumulative distribution function (cdf), $Q_A(x)$, to its stationary cdf, H(x), as A goes to infinity, is no worse than $O(\log(A)/A)$, uniformly for any $x\ge0$.
