### Realizability of Graphs

---

#### Abstract for the Combinatorics Seminar 2004 October 11

---

A graph is *d-realizable* if, given a realization of the graph in some Euclidean space, there exists a realization in  $d$ -dimensional Euclidean space with the same edge lengths. For example, any tree is 1-realizable, but a triangle is not. In this talk, we will classify all 3-realizable graphs.
