The Covering Number of a Semigroup

Abstract for the Combinatorics Seminar 2019 February 12

A semigroup is a set with an associative operation. A subsemigroup is a subset which is a semigroup with the same operation. $\sigma(S)$, the *covering number* of a semigroup S (with respect to subsemigroups), is the minimum number of proper subsemigroups whose union is S . I will give a complete description of the covering numbers of finite semigroups.
