

Statistics Seminar
Department of Mathematical Sciences

DATE:	Thursday, November 20, 2014
TIME:	1:15pm to 2:15pm
PLACE:	OW 100E
SPEAKER:	Nan Bi (Binghamton University)
TITLE:	Paper review on "Clustering Stability: An Overview"

Abstract

A popular method for selecting the number of clusters is based on stability arguments: one chooses the number of clusters such that the corresponding clustering results are "most stable". In recent years, a series of papers has analyzed the behavior of this method from a theoretical point of view. However, the results are very technical and difficult to interpret for non-experts. In this monograph we give a high-level overview about the existing literature on clustering stability. In addition to presenting the results in a slightly informal but accessible way, we relate them to each other and discuss their different implications.
