

Statistics Seminar  
Department of Mathematical Sciences

<b>DATE:</b>	Thursday, November 3, 2016
<b>TIME:</b>	1:15pm to 2:15pm
<b>LOCATION:</b>	WH 100E
<b>SPEAKER:</b>	Aleksey Polunchenko, Binghamton University
<b>TITLE:</b>	Asymptotic Near-Minimaxity of the Shiryaev-Roberts-Pollak Change-Point Detection Procedure in Continuous Time

**Abstract**

For the classical continuous-time quickest change-point detection problem it is shown that the (randomized) Shiryaev-Roberts-Pollak procedure is nearly minimax-optimal (with minimaxity understood in the sense introduced by Pollak in his seminal 1985 Annals paper) asymptotically as the false alarm risk goes to zero. The discrete-time analogue of this result was previously obtained by Pollak in 1985 in his Annals paper.
